PNAS Author Center

MENU

Submitting Your Manuscript

PNAS welcomes submissions in all scientific disciplines from researchers worldwide. Information on submitting your manuscript is included below. Due to the volume of submissions received, PNAS does not consider presubmission inquiries. Please contact us if you have any questions about the submission process. Click here for information about submitting to *PNAS Nexus*.

SUBMIT YOUR MANUSCRIPT CONTACT US

PNAS Article Types

Unsolicited article types

Research Reports describe the results of original research of exceptional importance. The preferred length of these articles is six pages, but PNAS allows articles up to a maximum of 12 pages. For example, a standard six-page article is approximately 4,000 words, 50 references, and four medium-size graphical elements (i.e., figures and tables).

- **Direct Submissions**: Most PNAS articles are Direct Submissions.
- **Contributed submissions:** NAS members may contribute two research manuscripts annually within their area of expertise in which they had a direct, significant role in the design and execution of the work. Learn more about the Contributed submissions process.

Brief Reports describe observations of immediate impact that may hold potential to initiate new avenues of research, provide compelling new data on controversies of broad interest and long-standing questions, or present a concise conceptual advance.

- **All Brief Reports are published Immediate Open Access.**
- Brief Reports are limited to three pages, which is approximately 1,600 words (including the manuscript text, title page, abstract, and figure legends), and 15 references.
- Supporting information (SI) is limited to extended methods, essential supporting datasets, and videos (no additional tables or figures).
- All Brief Reports follow the Direct Submission mode of review and are not eligible as member-contributed submissions.

Letters to the Editor provide brief comments that allow readers to constructively address a difference of opinion with authors of a PNAS article.

- Letters must be submitted within six months of the first online publication date of the subject article.
- Letters are limited to 500 words, two graphical elements (figures or tables), and 10 references. Legends should only include brief descriptions of the figures. Supporting information is not allowed. Data and code used to support the Letter may be posted in a repository and cited in the Letter. Additional discussion, tables, or figures are not allowed.
- Letters may not include references to submitted papers or unpublished results, requests to cite the Letter writer's work, accusations of misconduct, calls for retraction, or personal comments to an author.
- Letters typically publish alongside an Author Response from the authors of the subject article.
- PNAS will consider Letters for Brief Report, Contributed, Direct Submission, Inaugural, Opinion, and Perspective articles.

Opinions are succinct essays that appear in the Front Matter section. Authored by researchers, Opinion pieces further the discourse on a timely topic or offer a call to action through a clearly articulated argument that presents novel ideas or proposals. Opinions are not summaries or synopses; the essay's argument should be explicitly stated early on, and then supported in the text. Submissions should also address relevant counter-arguments. All authors are welcome to submit proposals for consideration. We especially welcome a broad range of voices and contributors. Submissions deemed appropriate for the section are reviewed by at least one NAS member, or other expert, who has the relevant expertise. Submissions should be approximately 1,500–2,000 words, not including references, and do not require abstracts.

By invitation only

Commentaries call attention to articles of particular note.

Inaugural Articles provide newly elected NAS members an opportunity to introduce themselves to the readers of PNAS. Inaugural Articles may be submitted by newly elected NAS members within five years of election. These are predominantly original research articles that may contain new ideas or hypotheses or describe the historical development of the member's field. They may contain a personal perspective component, but Review articles are not considered.

Front Matter is a magazine section that tells the stories of science. Sections include News Features, Science and Culture, Inner Workings, Core Concepts, QnAs, Profiles, and the *Science Sessions* podcast. All of these elements are written or produced by science writers and journalists who receive assignments from PNAS editors.

Perspectives should identify a critical science problem, provide a state-of-the-art assessment, and offer new insights or a new approach to its resolution. The narrative style may vary, but each Perspective should focus on an important area of research and be accessible to a broad scientific audience. Perspectives may help contextualize findings within a field or add a new dimension to previously published research. Current advances and novel insights are encouraged. To submit a proposed article, select "Presubmission for Perspective." Invited Perspectives are reviewed as described in the Peer Review Process. PNAS allows up to a maximum of 10 pages for these articles.

Author Responses are invited at the request of the Editorial Board. They briefly respond to points raised in Letters to the Editor regarding PNAS articles published in the past six months.

- Author Responses are limited to 500 words, two graphical elements (figures or tables), and 11 references, including one reference to the associated Letter and one to the subject article. Legends should only include brief descriptions of the figures. Supporting information is not allowed. Data and code used to support the Response may be posted in a repository and cited in the Response. Additional discussion, tables, or figures are not allowed.
- Author Responses will typically publish alongside the associated Letter to the Editor.

Special Features in PNAS are carefully curated collections of articles that explore significant topics in areas of interest to PNAS readers and make important contributions to the science and literature. Proposals for Special Features are reviewed by Editorial Board members and other subject matter experts to ensure they present a cohesive and balanced collection that will be of interest to a broad audience. Topics of Special Features are often interdisciplinary and may be in emergent fields or those underrepresented in PNAS. Papers invited as part of a Special Feature undergo the same rigorous review process as Direct Submissions and Perspectives. Accepted papers publish when ready and the entire collection is highlighted when the feature concludes. PNAS is committed to broad participation in the organization and authorship of Special Features. All Special Feature organizers and participating authors must declare any competing interests.

Colloquium Papers are reports of scientific colloquia held under NAS auspices.

Initial Submissions

PNAS follows a format-neutral policy for initial submissions, meaning your manuscript does not need to adhere to strict journal formatting guidelines to be considered. However, we do require the following information:

1. a manuscript file (in any format) including the following:
    - title page (title, author list, classification, keywords)
    - abstract
    - significance statement
    - main text
    - references
    - figures or tables with appropriate legends (may be uploaded separately)
    - SI files (may be uploaded separately)
2. contact and competing interest information for all authors
3. data sharing plans (for all data, documentation, and code used in analysis)
4. funding information and whether an open access license has been selected
5. list of appropriate Editorial Board members, NAS members, and qualified reviewers (minimum of three each) who are experts in the paper's scientific area. (A brief justification for suggested reviewers is welcome, particularly for interdisciplinary papers)

PNAS will consider manuscripts for review as long as all the components listed above are included in your submission. For more detailed guidance on manuscript formatting, including what to include in each section of your file, please see the **Manuscript Formatting Guidelines** below.

To learn more about the initial submission process for member-contributed submissions, click here. Please note that the final version of the paper must be submitted by the last day of the year to count toward that year's annual limit.

Revised Submissions

Revised papers must be submitted within two months of receiving the revision decision or they will be treated as new submissions. If you need more time, please notify PNAS. Along with the information provided at initial submission, revised submissions must also include:

- a revised version of the manuscript and
- a point-by-point response to reviewer comments.

The revised version of the manuscript should be uploaded as a Manuscript file type. Authors are strongly encouraged to include a tracked-changes file for review purposes. Revised submissions are encouraged to adhere to all **Manuscript Formatting Guidelines**, including the **Publication-Ready Source File Guidelines**. Please note that multiple revisions are rarely permitted, and acceptance of the paper is not guaranteed. If you have any questions regarding manuscript formatting or the revision process, please contact us for assistance.

Manuscript Formatting Guidelines

Read the Initial Submission Guidelines to learn about formatting requirements for submitting to PNAS. Before preparing your revised submission, be sure to review the Revised Submission Guidelines. Detailed formatting instructions are provided below.

Manuscript templates

Please use the templates below to prepare your manuscript for PNAS.

Word	LaTeX (Overleaf)
Research article	Research article
Brief Report	Brief Report
SI Appendix	SI Appendix

Support for LaTeX templates is available through Overleaf. If you have questions about submitting your manuscript in LaTeX, please contact PNAS and include the manuscript file as an attachment when possible.

Manuscript order

Submitting your manuscript sections in the following order will help us to locate key information more easily. Please number all manuscript pages starting with the title page. The recommended order is:

1. Title page
2. Abstract
    - Explain to the general reader the major contributions of the article
    - Include no more than 250 words
    - Cite all references in the abstract in full within the abstract itself AND in the text
3. Significance statement (Direct and Contributed Submissions only)
    - Explain the significance of the research at a level understandable to an undergraduate-educated scientist outside their field of specialty
    - Include no more than 120 words
4. Main text
    - Introduction
    - Results
    - Discussion
    - Materials and methods (describe procedures in sufficient detail so that the work can be repeated)
5. Acknowledgments and funding sources
    - Spell out all abbreviations
    - Use FundRef to identify the standard name for any funders
    - Do not include dedications
6. References
7. Figure legends

Title page element

Please include the following information on the title page:

Title page element	Description
Title	Keep the title brief (< 135 characters), descriptive, and comprehensible to a broad scientific audience. Include the studied organism. Avoid numbers, acronyms, abbreviations, punctuation, and puns.
Author line	Include full names of all authors in the order intended for publication. Use asterisks (*) to designate co-corresponding authors and numbered footnotes to indicate equal contributions.
Author affiliations	Include, in this order, department/laboratory/section/division, institution, city, state with ZIP code (for US institutions), or country with postal code (for non-US institutions). Use superscripts to match authors with institutions. Multiple affiliations are allowed. Affiliations where the work was done should be listed. If an author's affiliation has changed since the work was done, the current affiliation should also be listed and noted as such. PNAS requires the corresponding author to supply an ORCID identifier at submission and strongly encourages all authors to use an ORCID ID. Do not include ORCIDs in the manuscript file; individual authors must link their ORCID account to their PNAS profile at www.pnascentral.org. For proper authentication, authors are not permitted to add ORCIDs on proofs. Learn more or register for ORCID.
Corresponding author	Include the name, complete address, phone number, and email address of the author(s) to whom correspondence and proofs should be sent. Note that corresponding authors' email addresses will be published in the article footnotes.
Preprint servers	If applicable, note if a manuscript was deposited as a preprint, including to which server(s) and the article's licensing information.
Classification	Select both a major and minor classification category. Dual classifications are permitted between major categories.
Keywords	Include at least three keywords at submission.

Classifications

Select a major category (Physical Sciences, Social Sciences, or Biological Sciences) and a minor category from the following. Dual classifications are permitted between major categories. Dual classifications within a major category are only permitted in exceptional cases and are subject to Editorial Board approval.

Physical Sciences
Applied Mathematics; Applied Physical Sciences; Astronomy; Biophysics and Computational Biology; Chemistry; Computer Sciences; Earth, Atmospheric, and Planetary Sciences; Engineering; Environmental Sciences; Mathematics; Physics; Statistics; and Sustainability Science.
Social Sciences
Anthropology; Demography; Economic Sciences; Environmental Sciences; Political Sciences; Psychological and Cognitive Sciences; Social Sciences; and Sustainability Science.
Biological Sciences

Agricultural Sciences; Anthropology; Applied Biological Sciences; Biochemistry; Biophysics and Computational Biology; Cell Biology; Developmental Biology; Ecology; Environmental Sciences; Evolution; Genetics; Immunology and Inflammation; Medical Sciences; Microbiology; Neuroscience; Pharmacology; Physiology; Plant Biology; Population Biology; Psychological and Cognitive Sciences; Sustainability Science; and Systems Biology.

Main text

Please take note of the following when preparing your manuscript for PNAS:

- Do not include statements of novelty or priority.
- Avoid laboratory jargon.
- Use correct chemical names.
- Specify strains of organisms.
- Display trade names with an initial capital letter only.
- Provide names of suppliers of uncommon reagents or instruments.
- Use Système International units and symbols whenever possible.
- Only link to websites that are permanent public repositories, such as self-perpetuating online resources funded by government, academia, and industry. Links to an author's personal web page are not acceptable.
- Use standardized nomenclature for species-specific gene and protein names (see Genecards, MGI Nomenclature page, HUGO Gene Nomenclature Committee, the Wheat Initiative, or equivalent resources).
    - Proposed gene names must be deposited to and approved by the appropriate nomenclature committee before publication of the article.
- Ensure that abbreviations are accessible to a broad scientific audience. Define all abbreviations that are specific to a particular field at first mention in the text.
- Use international standards on nomenclature. PNAS uses *Scientific Style and Format: The CSE Manual for Authors, Editors, and Publishers* (8th edition, 2014) as the primary style guide.
- If you believe your manuscript would benefit from professional editing, we encourage you to use an editing service (see list here) prior to submission. PNAS does not take responsibility for or endorse these services, and their use has no bearing on acceptance of a manuscript for publication.
- We encourage authors to follow the Text Recycling Research Project's Best Practices for Researchers.

Publication-ready source file guidelines

Once your manuscript is accepted, PNAS will request publication-ready source files. Please follow the guidelines below when preparing these files. Extensive edits are not permitted at this stage; only minor edits will be allowed during the proofing process.

Manuscript file

Manuscript files must meet the following criteria:

Accepted formats:

- Word, RTF, or LaTeX format
- No embedded figures, tables, or schemes
- Equations must be editable; images are not acceptable
- In-text footnotes should be indicated with symbols in this order: *, †, ‡, §, ¶, #, ||,**, ††, ‡‡, §§, ¶¶, ##

LaTeX

The PNAS submission system runs PDFLaTeX (Overleaf's default). Please use the latest version of LaTeX2e to prepare your files. Using other versions or alternate engines (such as XeLaTeX or LuaLaTeX) may cause compilation issues at submission.

- PNAS LaTeX template
- Main class file
- Main style file
- Equations spanning two columns
- Bibliography style file
- Additional LaTeX Instructions

Basic rules

- Upload .cls, .sty, .bib, .bst, .bbl, and .ldf files using the "LaTeX Support File" file type. The PNAS submissions system treats each LaTeX submission as a single directory.
- Avoid nesting, cross-referencing, and using input commands, as these will cause compilation errors.
- Do not remove packages that are included in the Overleaf template.
- When adding packages to the template, ensure that their commands do not clash with existing packages.

Figures and tables

- Use the \includegraphics command within the main manuscript file and upload each figure source file in the submission system separately using the “Figure” file type.
- Include tables within the main manuscript .tex file only.

References

- Use pnas-new.bst for the current PNAS bibliography style.
- Use the Automatic Journal Title Abbreviation package provided in Overleaf to prevent references from appearing longer than they would in publication.

Resolving compilation problems in submission

- To recompile the manuscript file, delete the original file from the submission and upload it again.
- Upload an alternate PDF as a “Related Manuscript File” if the system-compiled PDF is incomplete or inaccurate.

Figures

Supply figures and schemes as high-resolution files whenever possible. Please review the PNAS Digital Art Guidelines before uploading images.

PNAS strives to ensure articles are accessible for readers throughout the world by offering article PDFs that are easily suitable for downloading in any environment. To accommodate size and content, article PDFs are processed to display images at 200 ppi, which will guarantee quality at print size. The HTML display of an article offers 300 ppi for all images. In addition, the option to enlarge each figure and table in the HTML display is available to closely review comprehensive details, as necessary.

- Provide all images at final size. While figures may be sized conservatively to save page space, PNAS reserves the right to make the final decision on figure size in published articles and authors may be asked to shorten manuscripts that exceed the stated length requirement.
  - Small: approximately 9 cm x 6 cm
  - Medium: approximately 11 cm x 11 cm
  - Large: approximately 18 cm x 22 cm
- Ensure that all numbers, letters, and symbols are no smaller than 6 points (2 mm) and no larger than 12 points (6 mm) after reduction. Keep text sizing consistent within each graphic.
- Preassemble all composite figures.
- Submit images in these file formats: TIFF, EPS, PDF, or PPT.
- Submit 3D images as either PRC or U3D. For each 3D image, include a 2D representation in TIFF, EPS, or PDF format.

Alternative text

Beginning with Volume 123, PNAS includes alternative text, or alt text, for all journal figures in the version of record hosted on the PNAS website. Alt text is a short description of an image that conveys essential context to readers using screen readers and improves digital accessibility. Alt text is generated during production using generative AI technology and is reviewed by a scientific editor to ensure accuracy. To learn more about accessibility at PNAS, including a link to download the latest Voluntary Product Accessibility Template, please visit our Accessibility page.

Tables

- Ensure that the table is in an editable Word, RTF, or LaTeX format.
- Include a brief title (above) and footnotes (below) the table.
- Avoid multipart tables (Table 1A, Table 1B).

	Raster	Vector
Definition	Images composed of pixels (also called “bitmapped” or “pixelmapped” images). Use for non–line art images, e.g., scanned artwork, digital photographs, complex imagery, and color effects such as blended colors, shading, shadows, and gradients.	Images composed of paths (points, lines, and curves) that are created with mathematical formulas. Use for line art images, e.g., graphs, polygons, logos, illustrations, circles, and ellipses, all predominantly composed of solid colors with sharp lines and contrasts.

	Raster	Vector
Sample	 • Notice pixelation and blurriness of numbers, and jagged edges of lines. For details, magnify image by using zoom function.	 • Notice continuous smooth paths of numbers and lines. For details, magnify image by using zoom function.
Resolution	• Graphics are resolution dependent; scaling to different sizes results in quality loss. • Images with large dimensions will maintain large file sizes.	• Graphics are **not** resolution dependent; they can be scaled to any size without quality loss. • Images with large dimensions will maintain smaller file sizes.
File types	• JPGs, GIFs, TIFFs, and EPSs/PDFs originating from raster programs. • Common programs: Adobe Photoshop, Corel Painter, SketchBook Pro, and GIMP.	• AIs and PPTs/EPSs/PDFs originating from vector programs. • Common programs: Adobe Illustrator, Corel DRAW, Sketch, PowerPoint, and Canva.
Requirements and tips	• 300 ppi for grayscale or color images with no type or lettering, 600–900 ppi for grayscale or color images with type, and 1000–1200 ppi for line art, e.g., bar graphs. • Color mode should be RGB. • Avoid embedding text in graphics. • Raster-based files can have low resolution in the published article, as they cannot be altered in size without losing quality.	• 300 dpi for grayscale or color images with no type or lettering, 600–900 dpi for grayscale or color images with type, and 1000–1200 dpi for line art, e.g., bar graphs. • Color mode should be RGB. • Best for creating text in graphics. • Vector-based files provide maximum flexibility for sizing your figures, as they can be altered in size while maintaining high-quality resolution.

Figure legends

Include figure legends immediately after referencing the figure in the manuscript. Ensure that figure legends adhere to the following guidelines:

- For figures with multiple panels, the first sentence of the legend should be a brief overview of the entire figure. Explicitly reference and describe each panel at least once in the figure legend.
- Include clearly labeled error bars in all graphs and describe them in the figure legend.
- State whether a number that follows the ± sign is a standard error (SEM) or a standard deviation (SD).
- When applicable, provide the *P* value, magnification, or scale bar information.
- Indicate the number of independent data points (*N*) represented in a graph in the legend.
- Ensure that numerical axes on all graphs go to 0, except for log axes.

References

References must be in PNAS style and numbered in the order they appear in the text. Unpublished abstracts presented at meetings or references to “data not shown” are not permitted. References must not cite retracted articles except when referring to the retraction. PNAS expects authors to cite relevant works and relies on the editors and reviewers to note potential omissions during peer review. The journal reserves the right to ask authors to add relevant citations after publication as determined by editorial review.

Cite references in numerical order as they appear in text, and include all references cited in the main text in the main manuscript file. Include a separate citation list for references cited in the SI. Tables and figures will be inserted in the text where first cited; number references in these sections accordingly.

- Include the full title for each cited article. Use MEDLINE/PubMed abbreviations of journal titles or use the full journal title for any journals not indexed in MEDLINE.
- If there are more than five authors, list the first author’s name followed by *et al*.

- Provide volume numbers for journal articles as applicable; provide DOI numbers if volume numbers are not available.
- Provide page ranges for journal articles and book chapters.
- Provide date of access for online sources.
- If an article has been accepted for publication but is not yet published, note in-press status and include a DOI number when possible.

Archived code	2. C. Reynaud *et al.*, Tomography. Zenodo. https://doi.org/10.5281/zenodo.3712368. Deposited 15 July 2020.
Theses or dissertations	3. D. P. Hua, "Unique allosteric mechanism regulating protein-protein interaction through phosphorylation: A case study of the conformational changes in the syk tandem sh2 protein," PhD thesis, Purdue University, West Lafayette, IN (2016); Available from https://docs.lib.purdue.edu/open_access_dissertations/1367

Supporting information

SI will be published as provided by the authors and will not be edited or typeset.

SI file formats:

- *SI Appendix*: Supply a single PDF, combining all text, figures, tables, movie legends, and SI references. See the PNAS SI template.
- *Datasets*: Supply XLSX, RTF, PDF, CSV, GZ, or TXT files.
- *Movies*: Supply AVI, MOV, WMV, GIF, or MPEG files at the desired reproduction size and length. Movies are limited to 10 MB in size. Include a brief legend for each movie in the SI Appendix.
- *Software*: Supply source code or scripts in native file types.

When preparing SI files, please note the following:

- The main text of the paper must stand on its own without the SI.
- SI is referred to in the text and cannot be altered by authors after acceptance.
- Refer to the SI Appendix in the manuscript at an appropriate point in the text. Number supporting figures and tables starting with S1, S2, etc. References should be cited in numerical order as they appear in the SI; do not cite main-text references in the SI and vice versa.

If you choose to place detailed materials and methods in an SI Appendix, you must provide sufficient detail in the main-text methods to enable a reader to follow the logic of the procedures and results. The main article text also must reference the SI methods.

If a paper is fundamentally a study of a new method or technique, then the methods must be described completely in the main text.

Journal Cover Images

Authors are invited to submit scientifically interesting and visually arresting images for consideration as the cover of PNAS (see our archive). Illustrations need not appear in the article but should represent the work described in the manuscript. The overall cover design and composition must be original, and authors must grant PNAS a License to Publish. Stock photography will not be considered.

Cover images whose principal visual content or overall composition was created wholly or substantially using generative AI are not eligible. Limited use of generative AI to generate, edit, or enhance individual elements within otherwise original artwork may be acceptable, provided that generative AI does not create or substantially determine the principal visual content or overall composition. A brief description of the creative process must be provided, identifying the generative AI tool(s) used and explaining whether AI was used to generate, edit, or enhance any visual elements. For photographs, microscopy images, diagnostic images, or other images that represent research data or scientific evidence, generative AI may not be used to generate, add, remove, reconstruct, or materially alter the visual information within.

Authors are responsible for ensuring they have the rights, permissions, and licenses for all visual elements included in the cover image, including any content created or modified using generative AI.

To submit an image for consideration for the PNAS cover:

- Submit the image with your manuscript through the PNAS manuscript submission system or email it to PNASCovers@pnas.nas.edu. Contact PNAS for instructions on submitting large files.
- Include a brief lay-language caption (50–60 words) and image credit (e.g., Image credit:...).
- Submit an image at 21.59 cm wide by 27.94 cm high.
- Submit the file in EPS or TIFF format using RGB color mode.

Cover images must be submitted by the time your proof corrections are returned. If submitting an image outside the manuscript submission system, include the manuscript number, corresponding author name, phone, and email address. Authors will be notified whether their image has been selected. If a published cover image incorporates generative AI, an AI disclosure statement describing its use will be published with the cover.
